

(a) Connectome G

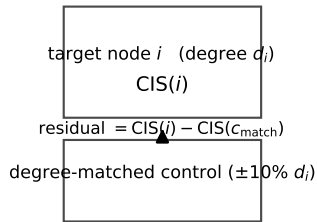

global efficiency $E(G)$

(b) Remove node i

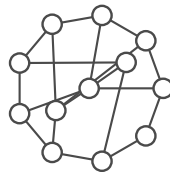

efficiency $E(G - i)$ on $G - i$

(c) Degree/strength control

1:1 greedy, no replacement;
nearest-50 fallback (flagged)

(d) Degree-preserving null

Maslov-Sneppen rewiring;
identical degree sequence
empirical p (add-one) $\rightarrow$ Stouffer z $\rightarrow$ BH-FDR
